🪪 SUMMARY

Experienced backend developer at Revlitix, specializing in Java and microservices architecture. Skilled in full-stack web development with proficiency in Java, JavaScript, NoSQL, and SQL. Recently began implementing React code and fixing bugs, expanding my expertise in front-end technologies. Expertise includes overseeing code reviews, merging, and maintaining robust code bases. Successfully led the development of a comprehensive reports module using MongoDB aggregations, enhancing data visualization and client engagement. Dedicated to delivering innovative backend solutions and continuous professional growth.

💼 PROFESSIONAL EXPERIENCE

Revlitix India Private Limited ↗   12/2022 – present | Bengaluru, India
Associate Software Engineer
- Collaborated with cross-functional teams to design, develop, and deploy backend solutions, ensuring seamless integration with front-end applications.
- Implemented RESTful APIs and optimized database queries to enhance application performance and user experience.
- Actively contributed to product development, suggesting innovative ideas and implementing new features.
